

Parcel Delivery Platform — Microservices Component Diagram

Actors: Sender Client, Rider | Architecture: Microservices

Legend

○ Provided interface (ball)

■ Newly identified component

■ Given component (per lab instructions)

- -> <<use>> dependency between microservices

— Actor-to-component interaction

Components (5 total): Order Manager, Payment Service (given) + Rider Matching Service, Routing & Optimization Service, OTP Verification Service (newly identified for this scenario).
Each microservice is independently deployable and owns its own data — enabling independent scaling of matching/routing and fault isolation.
